

## **AMENDMENTS TO THE CLAIMS**

This listing of claims replaces all previous versions and listings of claims in this application.

### **Claim Listing:**

1. (Currently amended) An information apparatus ~~to which a first display device and a second display device are connectable~~, comprising:

a first video output terminal to which a first of display device is connectable;

a second video output terminal to which a second display device is connectable;

a built-in display device different from the first and second display devices;

a display controller that outputs display data to at least one of the first video output terminal, the second video output terminal, and the built-in display device;

a keyboard;

a switch button;

a first switching process unit configured to switch, each time a predetermined key operation is effected on the keyboard, a display a destination of the display data to be output from the display controller to one of at least i) the built-in display device, ii) the first display device and iii) the second display device in a predetermined order, each time a predetermined key operation is effected on the keyboard; and

a second switching process unit configured to switch, when the first display device is disconnected, a display a destination of the display data to be output from the display controller between the built-in display device and the second display device, alternately, each time the switch button is depressed when the first display device is disconnected.

2. (Currently amended) The information apparatus according to claim 1, wherein the second switching process unit ~~switches, when the first display device is connected, a display~~ switches a destination of the display data to be output from the display controller between the first display device and the second display device, alternately, each time the switch button is depressed when the first display device is connected.

3. (Currently amended) The information apparatus according to claim 1, further comprising a setting process unit configured to change setting of a switching process of the second switching process unit to switch i) execution of a predetermined application and ii) screen display on the built-in display device, alternately, each time the switch button is depressed.

4. (Original) The information apparatus according to claim 1, wherein the first display device is a CRT device.

5. (Original) The information apparatus according to claim 1, wherein the second display device is a TV monitor device.

6. (Original) The information apparatus according to claim 1, wherein the built-in display device is an LCD device.

7. (Currently amended) An information apparatus ~~to which a CRT device and a TV monitor device are connectable~~, comprising:

a video output terminal to which a TV monitor device is connectable;

a CRT output terminal to which a CRT device is connectable;

a built-in LCD device different from the first and second display devices;

a display controller that outputs display data to at least one of the first video output terminal, the second video output terminal, and the built-in display device;

a keyboard;

a switch button;

a first switching process unit configured to ~~switch, each time a predetermined key operation is effected on the keyboard, a display switch~~ a destination of the display data to be output from the display controller to one of i) the LCD device, ii) the LCD device and the CRT device, iii) the CRT device, iv) the TV monitor device and the LCD device and v) the TV monitor device in a predetermined order, each time a predetermined key operation is effected on the keyboard; and

a second switching process unit configured to ~~switch, when the CRT device is disconnected, a display switch~~ a destination of the display data to be output from the display controller between the LCD device and the TV monitor device, alternately, each time the switch button is depressed when the CRT device is disconnected, and to ~~switch, when the CRT device is connected, a display switch~~ a destination of the display data to be output from the display controller between the CRT device and the TV monitor device, alternately, each time the switch button is depressed when the CRT device is connected.

8. (Currently amended) The information apparatus according to claim 7, further comprising a setting process unit configured to change setting of a switching process of the second switching process unit to switch i) execution of a predetermined application and ii) screen display on the LCD device, alternately, each time the switch button is depressed.

9. (Currently amended) A display device switching method applied to an information apparatus ~~to which a first display device and a second display device are connectable~~ and which includes a first video output terminal to which a first display device is connectable, a second video output terminal to which a second display device is connectable, a built-in display device different from the first and second display devices, a keyboard, and a switch button, the method comprising:

executing a first switching process for ~~switching, each time a predetermined key operation is effected on the keyboard, a display switching~~ a destination of the display data to be output from the display controller to one of at least i) the built-in display device, ii) the first

display device and iii) the second display device in a predetermined order, each time a predetermined key operation is effected on the keyboard; and

executing a second switching process for ~~switching, when the first display device is disconnected, a display~~ switching a destination of the display data to be output from the display controller between the built-in display device and the second display device, alternately, each time the switch button is depressed when the first display device is disconnected.

10. (Currently amended) who are The display device switching method according to claim 9, wherein the second switching process ~~switches, when the first display device is connected, a display~~ switches a destination one of the display data to be output from the display controller between the first display device and the second display device, alternately, each time the switch button is depressed when the first display device is connected.

11. (Currently amended) The display device switching method according to claim 9, further comprising:

causing to change setting of the second switching process to switch i) execution of a predetermined application and ii) screen display on the built-in display device, alternately, each time the switch button is depressed.
